

A one-page tour of Markdown

This page is a short tour of what one Markdown file can hold :rocket:

[TOC]

A chart

```
---
config:
  themeVariables:
    xyChart:
      plotColorPalette: '#2563eb'
---

xychart
  title "Cups of coffee sold per day"
  x-axis [Mon, Tue, Wed, Thu, Fri, Sat, Sun]
  y-axis "Cups" 0 --> 160
  bar [84, 92, 101, 97, 128, 150, 76]
```

A formula

LaTeX math works inside a sentence, like $A = \pi r^2$, and on a line of its own:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

A note and two lines of code

[!TIP] Alerts like this one stand out from the text around them.

```
cups = [84, 92, 101, 97, 128, 150, 76]
print(f"Best day: {max(cups)} cups")
```
