

Quarterly report

The YAML block above never renders. Open the PDF's document properties, usually File and then Properties in the viewer, and you will find the title and the author there, where a document management system or a search index reads them.

Key	Effect
title	The PDF title, shown in the viewer's tab or window bar
author	The PDF author
language	The document language, which selects the hyphenation dictionary and is written into the PDF for screen readers

The first heading of the document is still the visible title on the page. Keep the two the same unless you want a short window title for a long heading.
