

# Hiring plan: where the roles overlap

The data platform team in Lisbon hires three profiles this year. The diagram shows the skills the roles share, so one interview loop can test each shared skill once.

## Skills across the three roles

| Role               | Openings | Start |
|--------------------|----------|-------|
| Data engineer      | 2        | March |
| Analytics engineer | 1        | April |
| Platform engineer  | 1        | June  |

Every candidate does the data quality exercise; the overlap in the middle is the one skill all three roles need.
