

Embedded HTML

Markdown tables cannot merge cells. An HTML table can:

Region	Quarter	Units
Europe	Q1	12,400
	Q2	13,150
Asia Pacific	Q1	18,900
	Q2	21,300
Total, first half		65,750

A block can carry its own stylesheet. The rules apply to this block only, so the Markdown around it keeps the document style:

Delivery window

Orders placed before 14:00 local time ship the same day from the nearest warehouse.

Inline SVG inside HTML shares the vector renderer:

Northwind Freight

Scripts, frames and event handlers are removed before rendering, so a document can embed HTML from a template without risk. With `html_blocks` off, the blocks above print as code.
