

Inline formatting

Bold, *italic*, inline `code`, ~~strikethrough~~, and nesting: **bold with *italic* and code inside, *italic with bold inside***.

Water is H₂O, carbon dioxide is CO₂, the area of a circle grows with r^2 , and 1 km² is 10⁶ m². Press Ctrl+S (or ⌘+S) to save, and highlight what the reader must not miss.

A bit of inline HTML works as well: **bold**, underline, ~~struck~~, x², H₂O, and a colored span.

Links carry formatting too: [the bold link](#), [a code link](#), and ~~[a retired link]~~(<https://example.com>).

Escapes keep characters literal: `*not italic*`, ``not code``, 5 * 3 = 15, and a backslash itself: C:\Users.
